

## Maneuvering and the Airplane's Flying Nature

Maneuvering flight is an area that demands pilot attention and understanding. Despite all the focus this topic has been given over the years, accidents continue to occur. This 2-hour seminar will cover a brief discussion of lift/weight forces and how they are perceived and controlled safely in maneuvering flight by the pilot and by the very nature of a well-behaved airplane. Please contact Colorado Flight Center for further information.

**Directions:** From Horizon Drive follow the signs to General Aviation East and the West Star FBO. Park in the West Star customer parking and we are located upstairs in the 800 hangar directly West of West Star's main lobby

### A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at [www.FAASafety.gov](http://www.FAASafety.gov)!

The FAA Safety Team (FAASTeam) is committed to providing equal access to this meeting/event for all participants. If you need alternative formats or services because of a disability, please communicate your request as soon as possible with the person in the "Contact Information" area of the meeting/event notice. Note that two weeks is usually required to arrange services.
